**E-Lock Corporation  
WebAlarm – Providing  
Server Protection For  
Permodalan Nasional  
Berhad (PNB)**

## AN OVERVIEW

Permodalan Nasional Berhad (PNB) which is incorporated in 17 March 1978 by the government of Malaysia is Malaysia's premier investment institution. As an investment vehicle for the Yayasan Pelaburan Bumiputra (YPB), the core function of PNB is to evaluate, select and acquire a sound portfolio of shares in limited companies with growth potential. Being an organisation that specialises in investment, PNB in essence acts as a warehouse, whereby shareholdings in these limited companies are placed in trust funds and sold to unit holders in the form of smaller units.

## THE CHALLENGES

With an ever expanding investment portfolio and customers, PNB realizes that it requires a solution to provide solution to monitor and protect its' critical business application servers from threats. There is a critical need to ensure that the business application servers are protected from unauthorized changes to its' data and files and also threats from Malware. Thus PNB was looking for a cost effective solution that would continuously monitor, protect, recover and provide alerts in the event of unauthorized changes to the servers. The solution would also act as a change control management tool for the servers.

## THE SOLUTION

WebAlarm was chosen by PNB due to the availability of key features such as Auto Recovery, logging including forensic capture, instant alerts and Update Management Agent, The Auto Recovery feature is crucial feature that is required it it protects the servers from all types of unauthorized changes and malicious intents. The Update Management Agent enables PNB IT administrator to update its' servers with a single update push without having the need to stop the protection function.

## THE BENEFITS

With this solution PNB are able to manage any changes in its' servers. The capability to monitor and protect files and data 24x7 has proven to be highly valuable in ensuring the integrity servers' data and files of the business applications. WebAlarm has provide PNB with the capability to monitor all activities related to the servers and has dramatically improved it's capability to prevent data tampering.
